

BREAKTHROUGH MEDICAL TECHNOLOGY OFFERS

ADVANCED PAIN RELIEF

Unless you or someone you know has struggled with severe injury, chronic pain, or degenerative disease, it's difficult to understand the impact it can have on life.

But if you struggle with chronic pain, you know its debilitating effects. You've likely given up hobbies, family activities, and travel in your efforts to control pain and maintain functionality.

Unfortunately, until now, the only treatment options for these types of conditions have been surgery or addictive pain killers, which often have unwelcome side effects. But recent advances in medical technology may offer advanced, effective relief.

K-Laser, a state-of-the-art, Class IV laser therapy, has been found to penetrate tissue and initiate healing on a cellular level, even allowing some patients to return to normal, everyday activities with little to no pain.

IMAGINE A DAY WITH NO PAIN

Dr Barabas, from London, has offered K-Laser treatments in his practice since 2011 and confirms these findings.

"I'm thrilled with the outcome of K-Laser therapy. I'm now able to provide holistic, natural treatment for conditions that previously required invasive treatment or heavy medications with no promise of real relief."

His patients are happy as well. Here are a few of the responses he has heard:

"I can hardly express the relief I have received from one treatment." ~retired ER nurse, 25 years of chronic lower back pain

"This was dramatic pain relief! I began gardening again and using my treadmill for exercise." ~67-year-old with debilitating knee pain

"I can't believe the difference it is making. Thank you! Thank you! Thank you!" ~arthritic hip patient

THE SECRET IS LIGHT ENERGY

K-Laser, also known as High Power Laser Therapy, targets damaged tissue with specific wavelengths of light that have been found to interact with tissue and accelerate the healing process.

Much like photosynthesis in plants, light energy passes through the skin, into the cell membrane, initiating a process called photobiostimulation. This process enhances the body's natural regenerative functions, as well as stimulating the release of endorphins and collagen. It may eventually even normalize damaged or injured tissue.

The result? Accelerated wound healing, as well as reduced pain, stiffness, swelling, and spasms. As the injured area returns to normal, function is restored, so patients may take their life back and resume their favorite hobbies and activities.

CONDITIONS TREATED WITH K-LASER

High power laser therapy can stimulate all cell types, including soft tissue, ligaments, cartilage, and nerves. Some conditions that have been shown to respond well to K-Laser include:

- Peripheral Neuropathy, Fibromyalgia
- Back and Neck Pain
- Sciatic Pain
- Arthritis pain, Degenerative Discs/Joints
- Carpal Tunnel Syndrome
- Knee Problems
- Tendinitis, Trigger Fingers
- Bunion Pains, Plantar Fasciitis
- Sprains and/or Strains
- Bruises, Contusions, Burns
- Headaches, TMJ, Sinus Trouble
- Athletic Injuries
- Work-Related and Auto Injuries

RESULTS MAY EVEN BE SEEN AFTER 1 TREATMENT

Many patients report pain relief in as little as one treatment, and most are able to resume normal daily activities with no pain and restricted movement after their therapy is completed.

Treatments are administered by a technician, using a hand-held device the size of a flashlight. The laser is placed directly over the injured area for anywhere from 30 seconds to 9 minutes, depending on the size of the area being treated and the treatment plan.

Most patients report a warm, relaxing sensation. They generally experience no side effects or recovery period.

THE GOAL IS HEALING, NOT MERELY SYMPTOM RELIEF

For too long, medicine has focused on symptom relief rather than true healing. K-Laser offers an alternative, and it's a welcome change for athletes as well as patients interested in natural remedies.

Steve Donohue, Asst. Athletic Trainer of the N.Y. Yankees, reports, "We use the K-Laser both on acute and chronic conditions, such as bruises, contusions and tendinitis. We ice and then use the laser, and players seem to respond quicker. It's a hot item in the training room. The guys line up for it!"

More than 1200 studies conducted over 40 years worldwide have shown the powerful therapeutic benefits of high power laser therapy. Findings include:

- Acute Pain: diminished more than 70%, chronic pain more than 60%
- Chronic Low Back Pain: treatment effective in 71% of cases; pain eliminated completely in 45%
- Wounds: 55% greater healing on day 8, as compared to the placebo group
- Knee Injury: improved knee flexion and pressure sensitivity after every treatment

NOW AVAILABLE IN YOUR AREA

Are you a candidate for K-Laser therapy? For a limited time, [doctor's name or clinic] is offering a complementary visit valued at \$75.

"If you suffer from chronic pain, laser therapy may give you your life back. You owe it to yourself to try the advanced treatment options that are now available. I truly believe K-Laser can make a difference. My hope is that everyone who needs it will at least give it a try," said Dr. [your name].

To take advantage of this special offer, call XXX-XXX-XXXX before [date].

Clinic hours are 9:00am and 6:00pm, Monday through Friday. Tell the receptionist you'd like to come in for the "K-Laser Evaluation."

Sincerely,

Dr. Ralph Basse
